Particle size

Molecular weight

The ultimate in desktop particle characterization

# A routine analysis system for particle characterization

The Zetasizer Nano ZS90 brings you the practicality of a maintenance-free system with the versatility to offer precision measurement for your laboratory's particle characterization needs in a single compact unit.

### Particle Size

The ZS90 uses the technique of dynamic light scattering to measure the size of a wide range of materials within a maximum size range of 0.3nm - 5.0 microns diameter.

The measurement technique is absolute, no calibration is required and the measurement itself is simple.

The results are accurate and repeatable.

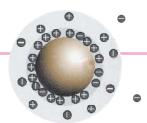

- Pharmaceutical dispersions and emulsions
- Nanoparticles
- Chemicals surfactant micelles
- Colloid size and size distribution
- Liposomes / vesicles

The Zetasizer Nano ZS90 offers the highest ever sensitivity, accuracy and resolution for the measurement of zeta potential. This is achieved by a combination of laser Doppler velocimetry and phase analysis light scattering (PALS) in Malvern's patented M3-PALS technique. Even samples of very low mobility can be analysed and their mobility distributions calculated.

### Zeta potential

- Emulsion stability
- Formulation stability
- Water treatment
- Pigment performance

# Quality control and Research

Standard Operating Procedures (SOP) ensure that measurements are simplified and results are repeatable between operators and sites.

Compatibility with ISO13321 and optional 21 CFR part 11 compliant software ensures all current recommendations and regulations are met.

An optional research software package gives access to further control of the system and analysis algorithms. A research grade correlator and sensitive Avalanche Photodiode Detector (APD) are standard.

### Advanced technology made easy

# How easy?

- Uses standard and low volume cuvettes for size
- Unique maintenance-free zeta potential cell
- No alignment, calibration or maintenance required
- Zeta potential and size can be measured in the same cell

1

# Power up the Zetasizer Nano ZS90 and launch the software

An automatic complete system self-check ensures that all components are ready for operation.

# Fill the size or zeta potential cuvette

The low volume, folded capillary cell is the first ever for zeta potential which does not require cleaning.

To eliminate cross-contamination; fill it, measure and, instead of cleaning, use a new one.

2

3

### Load the cuvette

Simply insert the cuvette, close the lid and it's ready to go.

### Run the measurement

From the menu, select the standard operating procedure (SOP) you need or set your own conditions and click the 'start' button.

4

5

### View the results

Predefined reports make reading, comparing and analyzing the results straightforward.

Remove the cuvette and you are ready for the next sample.

That's how easy

# Meeting your needs

At Malvern we strive for improvement in every instrument we design and produce. This process is made possible because we continually ask our customers what they think and what they need before turning those wishes into reality.

You asked for	We give you
Simple operation	Standard Operating Procedures (SOP) which ensures that measurements can be repeated using exactly the same parameters to give confidence in the result
Comparability with results from existing systems with 90 degree optics	90 degree scattering optics to ensure the result from polydisperse samples larger than 100nm give comparable results with existing systems
Elimination of sample cross contamination and no need to clean cell or electrodes	A unique maintenance-free folded capillary cell. The world's first disposable zeta potential capillary ce
Ability to measure zeta potential in high salt systems and non-aqueous media	Patented M3-PALS (phase analysis light scattering) technology gives operators improved resolution as well as automating the process of measurement
Best quality data	The best laser for DLS measurements and a research grade correlator fitted as standard to maximise the quality of the data collected
Flexibility of data manipulation	Software which incorporates a wide range of features as standard to display and recalculate results. An optional research software package to give additional data processing options, graphs, tables and reports for the light scattering scientist
Help with data interpretation	Quality reports that give an assessment of the data and the first Expert System incorporated into a light scattering instrument to give real time advice about the data quality
Compliance with regulatory standards	Compatibility with the requirements of 21 CFR Part 11 and the ISO13321 standard for dynamic light scattering measurements

# Accessories and cell options

#### Autotitrator

While zeta potential alone is often used to make comparisons between materials and formulations, measuring zeta potential as a function of pH, conductivity or concentration of an additive, provides much greater insight into the processes involved in stabilizing or flocculating disperse systems.

Using the MPT-2 autotitrator these measurements can be made automatically using 4mL of sample, or 10mL if pH is required.

Operation is fully automated and protocols can be specified as part of standard operating procedures.

### **SV-10 Viscometer accessory**

An accurate size measurement requires an accurate dispersant viscosity

- The SV-10 has a 1% accuracy over its whole range
- Measurements take 15 seconds
- Exceptionally easy to use, just dip the probes in the sample and press start
- Compatible with all fluids as sensors are gold plated

### **Autodegasser accessory**

- Simplify the use of the MPT-2 with the autodegasser accessory
- 'Fit and forget' operation

### Range of cuvettes for size, zeta potential and molecular weight

The range covers disposable cuvettes, glass for chemical compatibility, and low and micro volume for precious samples

### **Cuvettes for zeta potential**

### Disposable capillary cell

- No maintenance use for a series of experiments then discard
- Cross contamination is eliminated

### Universal 'Dip' cell

- Uses inexpensive polystyrene cuvettes
- Can be used for both aqueous and non-polar dispersants such as hydrocarbons

#### High concentration cell

- Offers the maximum concentration capability with the Zetasizer Nano
- Lowest volume capability
- Construction using PEEK and solid palladium electrodes ensures chemical compatibility

#### Product selector guide

Cell type	Aqueous	Non- Aqueous	Volume	Re-usable	Titratable	Size	Comment
Disposable folded capillary cell			750µL		•	•	
Dip cell	•	•	>750µL	•		•	
High concentration cell	•		150µL	•	•		Up to 40%w/v conc. (sample dependent)

### **Cuvettes for size**

Wide range of disposable polystyrene or quartz cuvettes with volumes as low as 20µL

# Software to make it happen

The excellence of the Zetasizer Nano ZS90 hardware can only be fully utilised with similarly advanced software. The operating software provides the flexibility required for measurement design and data analysis while retaining simplicity of operation.

The software is packed with features to aid the new and experienced user alike to get the most out of the system and give confidence in the data.

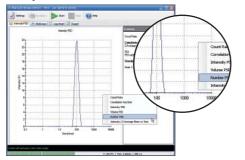

Quality reports provide an overview of the quality of the data and results – and advice about how to improve the measurement.

An 'Expert System' running in real time, examines the data from single and repeat measurements, and informs the user as the measurement progresses, an 'Expert standing with you' at all times.

A high degree of automation in the measurement process ensures simplicity of operation

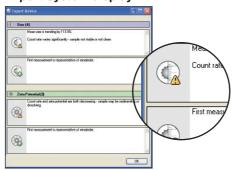

and avoids inappropriate settings.

### Sample measurement view

During data acquisition, status messages keep the operator informed of progress and an evolving distribution is displayed

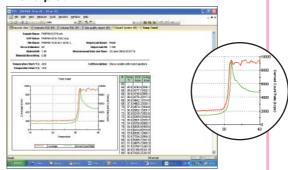

#### **Expert System display**

The 'Expert System' continually monitors data quality and gives continuing information as the measurement progresses

- fully automated operation for ease of use
- SOPs for repeatability between operators, systems and sites
- custom report generator to meet the requirements of every laboratory
- temperature trend analysis
- time trend analysis
- selected parameter trend analysis
- overplotting of results for direct comparison
- full range of statistical plots

#### Trend plot

Data can be plotted as a function of a wide range of parameters to investigate trends

Specification		Zetasizer Nano ZS90				
	Parameters measured	Materials				
	Hydrodynamic size, zeta potential and molecular weight	Particle dispersions, emulsions and molecular solutions				
Size	Size range maximum (diameter)	0.3nm - 5 microns*				
	Minimum sample volume	20μL				
	Measurement angles	12.8° and 90° (water as dispersant)				
Zeta potential	Size range suitable for measurement (diam)	Min. 3.8nm, max. 100 microns <sup>†</sup>				
	Mobility range	Min. zero, no effective maximum				
	Zeta potential range	No effective limitations				
	Minimum sample volume	750µL folded capillary cell and dip cell, 150µL high concentration cell				
	Maximum sample conductivity	200mS/cm				
	Conductivity accuracy	+/-10%				
	Signal processing	M3-PALS				
Molecular weight	Molecular weight range (estimated from	342Da to 2 x 10 <sup>7</sup> Da <sup>†</sup>				
	hydrodynamic diameter)	342Da to 2 x 10 Da				
	Molecular weight range (calculated using Debye plot)	9,800Da to 2 x 10 <sup>7</sup> Da <sup>†</sup>				
	Minimum sample volume	20μL				
General	Temperature control range	0°C - 90°C +/- 0.1°C, 120°C option**				
	Condensation control	Purge facility using dry air				
	Standard laser	4mW He-Ne, 632.8nm				
	Correlator	Min. sample time 25ns, max. delay time 8000s. Max. 4000 channels				
Accessories	MPT-2 Autotitrator	pH, conductivity or additive titration				
	Dip cell	Reusable zeta potential measurement cell				
	High concentration zeta potential cell	Max. 40%w/v <sup>†</sup>				
	SV-10 viscometer, viscosity range	0.3 - 10,000mPa.s				
	Auto-degasser for MPT-2	3 channel				
Options	High power laser/alternative wavelength	50mW, 532nm				
	High temperature option	Extends upper temperature range to 120°C				
	Narrow band filters, 633nm or 532nm	Improves signal for samples that fluoresce				
	Flow mode option	Enables use as a detector for SEC systems				
	21 CFR part 11 software option	Enables an operating mode that assists with ER/ES compliance				
	Research software option	Advanced system utilities				
Patents granted	High and Low frequency electrophoresis - Mixed mode measurement (M3)	UK 2361772, EP1154266, US 09/843339, JP 2001-134510				
System compliance	CE certification	Product laser class 1, EN 60825-1:2001 and CDRH				
System	Dimensions, weight, power	320mm, 600mm, 260mm (W,D,H), 21kg, 100W				
Notes	* Peak mode range (diameter), 0.6nm - 3 microns, sample dependent  ** Temperature accuracy, 0.1°C at 25°C, 0.2°C at 0°C and 0.5°C at 90°C, 1°C at 120°C  † Sample dependent
